

RTU academic master study program Business Informatics

DPI722 e-Services in Education and Science

Abstract

First part of the course introduces students to e-services, by reviewing related organizational issues and technologies available, for instance, identity management, portal technologies, payment systems etc. Second part on the course looks at the education and science industry to analyze organizational, technical and economical aspects of e-service implementation. The course objective is to acquaint students with technologies used to provide e-services. Tasks – to identify necessary e-services, by analyzing organization's main businesses and products and to review technical and organizational issues related to e-service implementation.
